Care instructions fabric-covered products

Fabric cleaning is easiest by vacuum cleaning with a soft nozzle.

Stains in the fabric must be removed immediately. Usually it is enough to wipe with a damp cloth. For harder stains use pH neutral detergent or foam detergent for professional use.

Use white cloths and avoid wetting the fabric too much as it can leave consisting stains.

If the washing instructions of the selected fabric allows, a foam detergent can be used for more thorough cleaning.

For cleaning of removable fabrics, use either water or dry cleaning according to the chosen fabric washing instructions.
